PKG-012 · Drill Pack — Six Household Tabletop Scenarios

Sample pages from: How to Run a Drill (Document 01), Scenario 2 — 3-Day Water Loss (Document 03), and the Blank Masters (Document 08) of the Drill Pack.

These are unaltered pages from the actual pack. Every scenario in the Drill Pack runs the same way: a premise and objectives, timed inject cards, printed decision log sheets, and a 20-minute debrief sheet with a fix list. Every sheet is a form your household fills in by hand — that is the product.

The pack ships in US Letter and A4 editions of every document.

FULL PACK: SHOP.EOTWSG.COM · 14-DAY NO-QUESTIONS REFUND · HOUSEHOLD LICENSE

PKG-012 · DRILL PACK · DOCUMENT 01

HOW TO RUN A DRILL

Front matter — read this first, before any scenario

SIX TABLETOP SCENARIOS · STANDARD ROLES · DECISION LOG · 20-MINUTE DEBRIEF · 12-MONTH CALENDAR

A checklist gets downloaded and forgotten. A drill gets run.

Every scenario in this pack is a tabletop exercise for one household, run around a kitchen table with paper, pencils, and the binder you already own. One person facilitates. Everyone else plays their actual household role — not a fictional character. You do not get to invent gear you do not own, water you do not have stored, or a relative who does not exist. If the scenario asks for it and your household doesn't have it, that is not a failure of play. That is the finding. Write it down.

Run time: 60–90 minutes at the table per scenario (2 hours for the capstone), plus a 20-minute debrief you do not skip.

WHAT'S IN THIS PACK

DOC	CONTENTS
01	**How to Run a Drill** — this document: the method, the standard roles, the decision log, the debrief, and the safety boundaries.
02	**Scenario 1 — 72-Hour Blackout.** The baseline drill, printed in full, ready to run tonight.
03	**Scenario 2 — 3-Day Water Loss.** Rations, sanitation, and the distribution-point call.
04	**Scenario 3 — Winter Storm.** Room consolidation, cold watch, and the leaving threshold.
05	**Scenario 4 — Wildfire Evacuation.** A real-time speed drill: go-triggers and the grab sequence.
06	**Scenario 5 — Comms Blackout.** Layers, check-ins, and the verify rule.
07	**Scenario 6 — Extended Grid-Down (Capstone).** Day 8 onward: routine, stores audit, posture.
08	**Blank Masters & the 12-Month Drill Calendar** — every sheet in the pack, blank, plus the calendar that keeps you running one drill a month.

Each scenario document contains its premise, objectives, role notes, timed inject cards, three decision log sheets, and a debrief sheet. Print the scenario, file the completed logs, and keep the blank masters (Document 08) in the binder for re-runs.

STANDARD HOUSEHOLD ROLES

The same six roles are used in every scenario. Assign them before the clock starts, every time — role confusion is the first thing a real event will punish.

ROLE	OWNS	IN EVERY SCENARIO, THIS PERSON…
Household Lead	The call	Makes final decisions when the table disagrees. States decisions out loud so the Logger can record them.
Facilitator / Inject Controller	The clock and the inject cards	Reads the scenario, deals inject cards at the stated times, does not play a household member, does not rescue the table.

SCENARIO 2 — 3-DAY WATER LOSS

One system down. Everything else working. Households under-react to this one.

DIFFICULTY 2 OF 6 · TABLETOP · 60–90 MINUTES + 20-MINUTE DEBRIEF

PREMISE

Municipal water stops at 09:00 on a weekday. No boil advisory information is available at start — the utility's notice says only "service interruption, crews dispatched." Power and comms are normal. That is what makes this drill different from Scenario 1: this is a single-system failure with everything else working, and households consistently under-react to it.

Systems exercised: Water & Sanitation (PKG-002 — find it, move it, treat it, store it, handle the waste), Planning & Documents (PKG-010).

Roles: standard roles (Document 01), with the Systems Keeper renamed in play as **Water Keeper** — the ration numbers are theirs to defend. Household Lead owns the sanitation decision; it cannot be delegated and it cannot be postponed past Hour 12 of scenario time.

OBJECTIVES

1. Inventory every litre/gallon in the home in 20 minutes of play — stored water, water heater, toilet tanks (decision point: potable plan yes/no and why), containers that could be filled if a supply point opens.
2. Set and enforce a per-person daily ration for drinking, cooking, hygiene, and flushing — four separate numbers, logged, that add up to what the household actually has for three days.
3. Solve sanitation without flushing volume: waste handling per PKG-002 discipline — decisions only at the table: location, containers, separation, disposal.
4. Decide collection/treatment triggers: under what condition does the household go to a distribution point, a neighbour's well, or a surface source — and what treatment step (per PKG-002) applies before anything is drunk.

INJECT CARDS — FACILITATOR DEALS AT THE STATED TIMES

INJECT 1 The advisory arrives — HOUR 2

Utility notice (Facilitator reads it): when service returns, a boil-water advisory will be in effect "until further notice."

FORCES: *what changes now — treatment stores, fuel for boiling, who in the household cannot reliably boil (kids, elderly, absent members).*

INJECT 2 Distribution point — HOUR 9

A municipal distribution point opens 4 km away, one container per household per trip, hours 10:00–16:00, queue reported at 90 minutes.

FORCES: *go / don't go, who goes, with what containers, what the trip costs in time and fuel.*
